

AMENDMENTS TO THE SPECIFICATION

In the Specification:

Please replace the paragraph beginning on page 9, line 29 and ending on page 10 line 15 with the following rewritten paragraph:

Although the scope of the present invention is not limited in this respect, the recording may start by dialing, from the remote station C 160, an accessing code for example, “*500”, as is shown in block 510. The transportation, e.g. data packets, from communication channel 136 to remote station C 160 may be recorded by the server 400. The subscriber, which may be the recording originator, may dial to any remote station with whom the subscriber wishes to record the conversation, for example remote station A 140, as is shown in block 512. The conversation, e.g. data packets, between remote stations A 140, C 160 may be recorded by server 400 by alternating between media recorders 415, 420 that are in operation with the links of communication channels 124, 136 respectively (FIG. 1). Data packets comprising the media content of a conversation over communication channels 124, 136 may be stored at storage medium 460 (FIG. 2). Recording of the conversation may be ended by hanging up the conversation, block 514. In an alternative embodiment of the present invention the recording of the conversation may be stopped by dialing an access code, for example “*501”, by the subscriber of remote station C 160 (block 516). In addition, subscriber may use the recording service to turn the remote station, e.g. personal communication assistance (PCA) into a recording device. In this case, the content of the recording may be stored at protected media storage 440.

Please replace the paragraph beginning on page 11, line 5 with the following rewritten paragraph:

Although the scope of the present invention is not limited in this respect, the subscriber may enter to the home page of the service from remote station G 310, e.g. a PC. At the home page, the subscriber may provide user name and passcode, as is shown in block 530. Hence, the subscriber may enter to the service site and select the recorded conversation file, block 532. For example, the selected file of the conversation may be generated by file

generator 445 and may be stored at protected storage location 440 (FIG. 2). Subscriber may download the selected file to the computer, e.g. remote station G 310 or remote station H 320, (block 534) and play the file by alternating between two or more media decoders of the computer, as is shown in block 536. ~~blocks 534, 535~~
